

Instructions for Submission

- Create a folder named RollNo_Name_DBI202_PaperNo (e.g., HE170145_LongNT_DBI202_01). Do not create any subfolders. All files must be placed directly in this folder.
- For each question, create a SQL script file named according to the question number. For example, Question 1 must be saved as Q1.sql, Question 2 as Q2.sql, and so on. If the exam contains 10 questions, your folder must contain only the following files:
 - Q1.sql, Q2.sql, Q3.sql, Q4.sql, Q5.sql, Q6.sql, Q7.sql, Q8.sql, Q9.sql, and Q10.sql.
- Do not use any commands that specify or modify the database itself, such as CREATE DATABASE, ALTER DATABASE, USE [database_name], or similar commands.
- Each answer must contain only the SQL statements required to solve the corresponding question. Do not include any testing code or unrelated commands. For example, if you are asked to create a stored procedure, trigger, or function, your script must contain only the CREATE PROCEDURE, CREATE TRIGGER or CREATE FUNCTION statement(s). Statements used to execute, test, or verify the results are not allowed.
- Do not use the GO command in any script.
- After completing the exam, submit your work by importing/browsing to the folder specified above.

Examination Regulations

During the examination, you are allowed to use only:

- Microsoft SQL Server.
- SQL Server Management Studio (SSMS) without any AI features, AI assistants, AI plug-ins, or AI extensions enabled or installed.
- Printed materials or offline documents that are already stored on your computer before the examination.
- A network connection **only** to the **ExamOnline** Wi-Fi network for examination purposes.

The following are strictly forbidden:

- Connecting to any network other than the **ExamOnline** Wi-Fi network, including personal hotspots, mobile data, VPNs, remote desktop services, cloud storage, or any other Internet connection.
- Accessing any website or online service that is not required for the examination.
- Any online or offline AI tools, including but not limited to ChatGPT, Microsoft Copilot, GitHub Copilot, Gemini, Claude, DeepSeek, Cursor AI, Codeium, Tabnine, Amazon Q, NotebookLM, LMStudio, Visual Studio Code (VSCode), or any other AI coding assistant.
- Any AI-powered extensions, plug-ins, browser add-ons, or IDE/SSMS extensions that provide code generation, code completion, explanations, or suggestions.
- Any communication or file sharing with other candidates or external parties.

Violation Policy

Failure to comply with any of the above requirements or examination regulations will be considered academic misconduct, and the examination score will be 0.

From Question 2 onward, you must use the database provided in the accompanying .sql file. Before answering the questions, execute the provided script to create the required tables and populate them with the supplied data. The database schema is shown in the following diagram.
